SUMMARY

Software engineer with 5+ years building responsive frontend systems in React and TypeScript. Shipped role-based access control and permission-driven UI for a multi-tenant SaaS platform, LLM-powered job description generation and AI-scored candidate evaluation surfaces, and the frontend for ATS integrations with Greenhouse and Lever. Experience spans HR tech products (Octagnt, Skillkeepr) and a US telecom platform built from scratch for Verizon (via Wipro).

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

React & Frameworks: React.js, React Hooks, React Router, Redux Toolkit, Redux Saga, Zustand, TanStack Query

Styling & UI: Tailwind CSS, Mantine UI, Material UI, Responsive Design

Testing & Quality: Jest, Vitest, React Testing Library, Lighthouse, Core Web Vitals

Build, CI/CD & Dev Tools: Vite, Webpack, Storybook, GitHub Actions (CI/CD), GitHub Copilot, Claude Code

APIs & Integrations: REST, WebSockets, Stripe, Greenhouse, Lever

Backend (Working Exposure): Node.js, Express.js, MongoDB, AWS Lambda (occasional REST endpoints for frontend features)

Tools & Methodology: Git, GitHub, GitLab, Jira, Postman, Kibana, Agile / Scrum

PROFESSIONAL EXPERIENCE

Software Engineer | HASpaces, Trivandrum | Jun 2023 - Sep 2026

Frontend engineer on two B2B multi-tenant SaaS products in HR tech: Octagnt and Skillkeepr.

Octagnt | AI hiring intelligence SaaS platform

- Implemented role-based access control (RBAC) with permission-driven UI rendering across 5 roles (Owner, Admin, Senior Recruiter, Recruiter, Viewer) in a multi-tenant architecture, with config-driven permissions so new roles could be added without frontend code changes.
- Delivered the subscription and billing system end-to-end on the frontend: Stripe Checkout and Billing Portal integration across 4 plan tiers (Trial, Starter, Growth, Enterprise), feature gating, credit allocation, and quota enforcement.
- Built the candidate review interface for a multi-agent AI evaluation pipeline (Decision Packet), with nine-dimension scoring and password-protected external sharing.
- Built a four-step role creation wizard with PDF/DOC/DOCX uploads, ATS import, LLM-powered conversational job description generation, and constraint-based screening configuration.
- Mentored 2 junior developers on React patterns and code review, and standardized AI-assisted development workflows with GitHub Copilot and Claude Code across the frontend team.

Skillkeepr | ATS SaaS platform

- Built recruiter admin portal features covering candidate fit analysis, Jitsi-based video interviews, and shortlisting.
- Built a responsive candidate portal for job discovery, applications, and interview attendance.
- Built the frontend for Greenhouse and Lever ATS integrations, enabling enterprise customers to bring jobs and candidates into automated recruitment workflows.
- Owned a major-version upgrade of the Mantine component library and the Node.js runtime across 3 frontend repositories, migrating 100+ components through a phased rollout with no user-facing regressions.

- Configured GitHub Actions pipelines to run lint, type-check, and tests on every PR, blocking merges on failure.

Project Engineer | Wipro, Chennai | Dec 2020 - Jun 2023

Verizon Engage - internal lead management platform for Verizon US retail representatives.

- Core contributor to the single-page application (SPA) built from the ground up, integrating four lead channels with six role levels for retail representatives across the US.
- Migrated the codebase from class-based to functional components and introduced route-level code splitting with lazy loading, reducing initial page load time by ~25% (Lighthouse, median run).
- Resolved 100+ critical SonarQube issues that were blocking production builds, clearing the quality gate for release.
- Established the unit testing practice for the team, reaching 80%+ coverage across core modules with Jest and React Testing Library.

EDUCATION

B.Tech, Computer Science | Adi Shankara Institute of Engineering and Technology, Kalady | 2016 - 2020

CGPA 8.3/10
